OBJECTIF LUNE

For immediate release

March 27, 2001

EasySpooler Releases EasyForm through Partnership with Objectif Lune

EasySpooler is proud to announce a recent partnership with Objectif Lune, the industry leader in printer resident forms technology. Objectif Lune was founded on the tremendous potential of the PostScript language, a standard in today's printing world. From day one Objectif Lune has specialized exclusively in the forms printing business.

EasySpooler and Objectif Lune proudly announce EasyForm, a companion product to EasySpooler. EasyForm utilizes Objectif Lune's PlanetPress, the PostScript program generator that drives INTELLIGENT FORMS. Inexpensive and user-friendly, EasyForm downloads INTELLIGENT FORMS to a printer. Printer resident (in ram, flash memory, or the hard drive), INTELLIGENT FORMS parses, formats, and conditionally displays images from any ASCII data from any application on any O/S. Host and printer independent, INTELLIGENT FORMS is optimized for speed because it does not require a single formatting instruction embedded in the incoming data stream.

EasyForm prints your form *as it prints* your job. Because EasyForm completely eliminates pre-printed forms, it immediately improves the quality of your output, greatly simplifies your operations, and dramatically reduces your printing costs. Because EasyForm macros are *printer resident*, and they print automatically with EasySpooler, they work with any O/S, they cannot increase traffic on your network.

EasyForm makes leaving the world of pre-printed forms irresistible.
