

PReS[®] Connect

OL[™] Software

Speed & Power, combined

High speed creation and production
of high volumes of personalised
business communications

Inputs

Enhance
documents

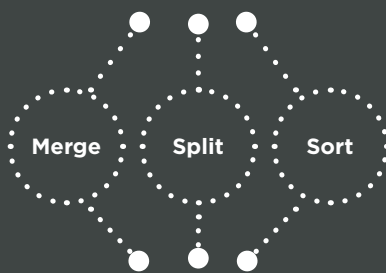

Barcoding

Images & Text

Organise
your
output
stream

Outputs

Print high volumes
at high speed

Output emails,
publish web pages

One solution to run it all

Create, process, format, enhance,
distribute and measure your
personalised business communications
with full automation capabilities.
For every stage of customer
correspondence management.

Output print,
HTML email,
text message⁽¹⁾
and web

Those outputs are
generated in PReS Connect,
natively in HTML.

The resulting
communications are
infinitely more stable and
flexible and they are created
with a unique tool for
increased productivity and
convenience.

Tailored to the
high volume
production
output market

PReS Connect works in
any IT environment and is
compatible with all hardware
brands. It comes with
AFP/IPDS and is available
with a selection of options
that make it possible to
customise every solution to
your needs.

Flexible service license agreement (SLA)

Our solutions are open and flexible so you can manage everything in-house. However, if you don't want to be bothered with it, our experts can do it for you, with a smile.

Flexible Licensing model

Do you prefer to pay upfront once? Maybe you prefer to subscribe and pay a smaller yearly fee? Choose the option that fits your needs.

EXTENSIVE MAINTENANCE PLAN

OL™ Care

- Online training
- Updates & upgrades
- Technical support

Be smart with your customer communications

- ✓ Manage all your business communications in one place.
- ✓ Increase productivity by aggregating multiple types of input such as composed flows or raw data in a single process.
- ✓ Increase capacity and performance.
- ✓ Development, testing and maintenance of workflows are more productive.
- ✓ Improve customer service by creating the right output type (mail, email, text message⁽¹⁾ or web), when the situation requires it and based on customer preferences.

Typical applications

Multichannel business communications

Print high volumes at high speed

Production automation

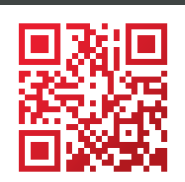

Hybrid mail

Correspondence management

(1) Requires subscription to 3rd party systems along with scripting.
